

Retail Media Monetization Benchmark, India - Executive Summary

A benchmark of retail-media ad monetization across three listed Indian marketplaces, built entirely from public disclosures - and a finding about which of them actually disclose the number that matters.

Headline result

Of Swiggy, Nykaa, and Eternal, only Swiggy discloses advertising revenue as a clean, standalone % of GOV.

Nykaa and Eternal both disclose a number that's easy to mistake for it - their own advertising *spend* - which this project deliberately excluded rather than conflating with ad *revenue*.

Company / segment	Period	GOV/GMV	Ad revenue disclosure	Implied ad revenue
Swiggy - Food Delivery	Q4 FY26	INR 9,005cr	≥4% (disclosed floor)	≥INR 360.2cr
Swiggy - Instamart	Q4 FY26	INR 7,881cr	6-7% (forward target, not current actual)	INR 512.3cr at midpoint
Nykaa (FSN E-Commerce)	FY26	INR 19,963cr	INSUFFICIENT DISCLOSURE	
Eternal (Zomato/Blinkit)		not sourced	INSUFFICIENT DISCLOSURE	

Resume-ready line

"Benchmarked retail-media ad monetization across three listed Indian marketplaces from public disclosures; found only 1 of 3 discloses ad revenue as a standalone % of GOV (Swiggy, ≥4% in food delivery), and correctly excluded two companies' ad-spend figures that are commonly mistaken for ad revenue - deriving an implied INR 360-512cr quarterly ad-revenue range from the one clean disclosure."

Why this finding matters more than a forced rate card

A rate-card benchmark built by treating "advertising expense" as "advertising revenue" for Nykaa and Eternal would have produced a clean-looking three-company table - and been wrong. This version is less tidy and more defensible: it shows exactly what's known, what isn't, and why.
