

Limitations

- **Only 1 of 3 companies has a usable standalone ad-revenue disclosure.** Nykaa and Eternal are documented in the source register with their real scale figures, but their ad-revenue line is INSUFFICIENT_DISCLOSURE - not estimated, not guessed.
- **Swiggy's food-delivery figure ($\geq 4\%$) is a disclosed floor, not a point estimate** - the true figure could be materially higher; treat the implied INR 360.2cr as a minimum, not an exact number.
- **Swiggy's quick-commerce figure (6-7%) is the company's own forward target, not a current achieved rate.** The implied INR 512.3cr is explicitly a target-based projection.
- **Two primary-source PDFs didn't parse for this build** (see Source Register) - this benchmark relies on financial-press summaries of the underlying filings, not directly re-parsed primary documents. A re-attempt with a different extraction method could surface more precise or more current figures.
- **Periods aren't aligned** - Swiggy figures are quarterly (Q4 FY26), Nykaa's is annual (FY26). Any chart comparing scale across these two is comparing different time windows, documented explicitly on the dashboard.
- **No CPM-based rate card was derived.** None of the three companies discloses impression/traffic volume, so a true CPM figure can't be computed from public data - only a monetization-intensity metric (ad revenue per rupee of GOV).
- **Disclosure practice changes quarter to quarter.** Re-read this file and re-check each company's latest filing before quoting any figure from this project.
